

- 1 Glyphosate is **probably carcinogenic**
- 2 Glyphosate **jeopardizes biodiversity** and destroys the habitats of birds, butterflies, and other insects
- 3 Glyphosate is the **world's most widely used pesticide**

Some of the world's biggest agribusinesses like Monsanto are concerned that the future of this highly profitable pesticide could be at risk. The European Commission will decide this year whether to re-licence glyphosate.

We are part of a Europe-wide campaign that is demanding the European Commission refuse to re-licence this hazardous chemical. Through a European Citizens' Initiative, we seek to influence the political debate and make one thing plainly clear to the European Commission: **European citizens want glyphosate banned!**

TO DO THIS:

WE NEED ONE MILLION SIGNATURES FROM ALL OVER EUROPE.

PLEASE SIGN NOW!

Please send the completed form on the back by **15 June 2017** to:
WeMove Europe, Planufer 91, 10967 Berlin.

If you want to download more forms for your friends and family to sign you can find them here: **www.stopglyphosate.org**

STOP GLYPHOSATE
